MAYMESTER COURSE

The best classroom is the one without walls! We encourage motivated, adventurous students to join us in a fun and engaging experiential learning atmosphere on the ground in Africa. A range of academic topics are offered through our programs, topics which can only be covered traveling through a country as diverse as Tanzania. Expect to see and participate in activities you may never have the chance to experience again. Favorite learning environments of previous students include: local communities, Serengeti National park, the coral reefs of Zanzibar and the climb up to the peak of Kilimanjaro.

COURSE OFFERINGS

SWAH 3020: Swahili Studies

(All students must participate in this class, credit is optional)

The course will explore aspects of the Swahili language and culture, its origins, civilization, and expansion from the coastal states to the hinterlands. The class and the readings will be in English, but students who have taken Swahili for two or more semesters will be encouraged to take advantage of being in the target language to strengthen their aural and oral skills. Students will be expected to interview (in English), speakers of Swahili on specific topics that will be assigned in class. The results of the interviews will be reported in a term paper.

ANTH 1102/2120R: Introduction to Anthropology

This course will study variation in human biology and culture from the earliest beginnings to the present, including a visit to the "Cradle of Mankind" at Oldupai Gorge. We will observe various primates in their natural habitats. We will study the relationships between human biology, culture and the environment and we will compare contemporary cultural differences, both within and beyond Africa. This course fulfills one of the Core Curriculum requirements for social science.

STUDY ABROAD TANZANIA

AFST/GEOG/SOCI/CMLT/HIST/ANTH2100: *Introduction to Africa*

This course is multi-disciplinary and provides students with an introduction to the study of Africa using Tanzania as a microcosm of the continent. We will survey the geology, pre-history, natural history, modern history, cultures and politics of Africa as we travel across the country experiencing many of these topics as they are illustrated in Tanzania. We will draw comparisons with many other parts of Africa that contrast with our own first-hand experiences. This course fulfills one of the requirements for either the Certificate or Minor in Africa Studies, and can fulfill either Area IV or Area V in the university core.

RELI/AFST 1200: *Introduction to African Religion*

This course will allow students the opportunity to explore the basic components of African Religion as basis for taking consecutive courses in African Religion. It should also foster a solid foundation for students taking upper courses in African Religion. In addition, it should provoke their thinking about religious values, particularly those of African Indigenous Religion, thereby, broadening the students' religious world views, with better understanding and appreciation of the African Religion in its unique background and yet with comparable valid religious values as other world Religions.

MAY 10 – JUNE 6, 2012

AFST/BIOL 3450: *Natural History of Africa*

During this course, students will acquire an understanding of basic ecology and conservation issues in Tanzania. We will: identify relationships between plants and animals from the arid savanna to the tropical coast, recognize the many ways living things are adapted to survive in their environment, and discuss issues threatening conservation of some endangered species and habitats of sub-Saharan Africa today. Additionally, students learn to observe and record natural history experiences in a scientific field journal.

AAEC/AFST/ADSC 3911 *International Agribusiness and Environmental Management*

This course will provide cross-cultural experiences and insight into the global agribusiness production, marketing and management, and environmental management options. Students will observe how exchange rates, marketing institutions, property rights, government regulations, and cultural practices impact international agribusiness transactions. Students will be analyzing how market information guides production and consumption decisions in other countries and study price differentials for foreign products and price premiums for specialty crops. Also, students will gain an understanding of the markets for Georgia products in the global economy.
